

Hjord-conveyor floor conveyor series 4500 is a system for medium-weight loads where extensive versatility is required. Series 4500 features double tracks where the chain runs in the lower track and the trolleys in the upper track.

The system permits buffering and addressing of carriers to given areas. The carriers can be fitted with a rotating index which enables turning of the load.

Effective and ergonomically correct loading and unloading by using different levels of the conveyor track.

Technical specification

Maximum temperature:	250° C
Maximum load:	200 kg
Horizontal curve:	Radius 700 / 1000 / 1500
Vertical curve:	10-30° (depending on work-load)
Switches:	45°
